

Updating to Sovereign AI Brain 7.0.0-5

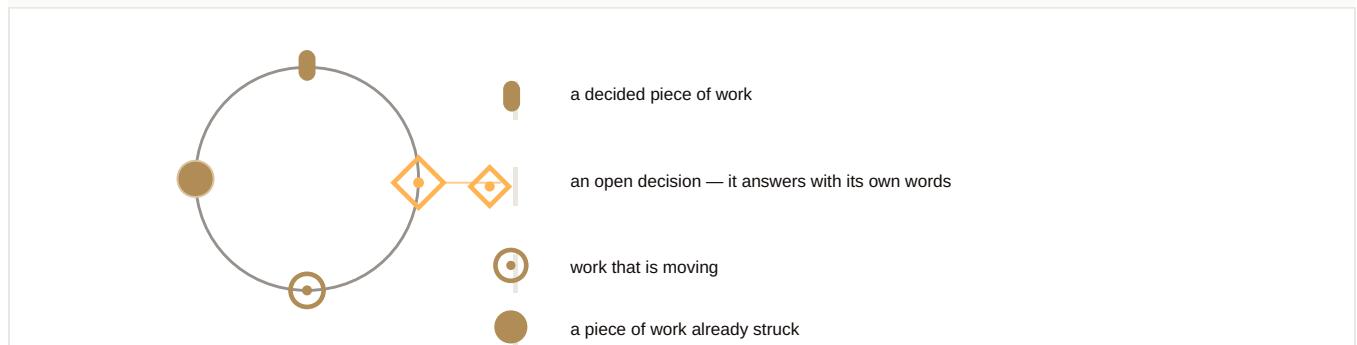

One download, one install. No terminal.

28 September 2026

What's new

No mark is anonymous any more

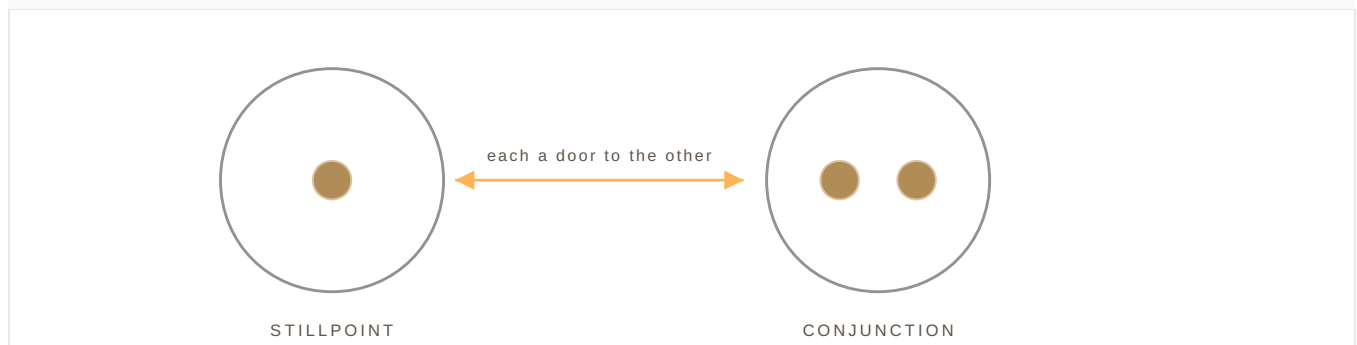

Hover, tab or tap any mark on Stillpoint or Conjunction and it tells you what it is — the item's own words, and its state. Each plate now carries a named list beneath the drawing, and the list and the drawing are one thing: point at a mark and its row lights up, focus a row and its mark lights up.

Four marks, each drawn as a different shape: a rounded pillar on the dial's top, an open diamond with a filled core on the right, a small centred ring at the bottom and a solid seal on the left. The line leaving the diamond is the one mark being asked, and the name it answers with sits at its end.

The two instruments point at each other

Conjunction is two Centurions; Stillpoint is one. Each now says which it is, and each is a door to the other, so you can move between the pair's view and your own without hunting for it.

Two rings drawn to the same weight. The left holds one solid bronze disc, the right holds two; an arrowed line runs both ways between them.

Your Centurion can find its own manual again

The Brain's own documentation skill had two names. Something asked for it by the old one and quietly found nothing, so when you asked how to configure or set something up the answer could come from guesswork rather than the reference. There is one name now, and the reference loads again.

THE ONE NAME ON ITS COVER

centurion-ai-os

THE NAME THAT FOUND NOTHING

~~centurion-os~~

One ring around an open book, split down its spine. To the right sit two labels: the upper one with a filled bronze disc beside it, the lower one struck through with a single line.

How to update

- 1

Sign in and open Account → Get Brain. Your download sits at the top of the page.
- 2

Double-click the downloaded file and choose Install. Fedora may ask for your password — that prompt is your computer, not us.
- 3

Reopen Sovereign AI Brain. Stillpoint and Conjunction load the rebuilt instruments.
- 4

Check the download first if you like: the sha256 below is the exact file we published.

Signed with Centurion’s release key. No reboot is needed — reopening the Brain is enough.

Before you install

A NOTE ON THE WARNING YOU MAY SEE

Fedora’s Software app labels anything it does not recognise as “Provided by a third party”. That is a statement about provenance, not about Centurion — every vendor package installed this way is labelled the same. Our builds are signed with Centurion’s release key, and the values below let you check that what arrived is what we published.

Release key fingerprint	25CB 4090 1F83 44D3 704F 9A4A C9E7 4757 8FA4 1F8F
sha256	f4c10d3aa0d8b03abf6328d8a26e9680c14f47ab39c174f3b8f689a4b7c718d8
File size	98,180,438 bytes (93.6 MB). No reboot required.

Centurion AI Agent Limited · this sheet describes Sovereign AI Brain 7.0.0-5 as published for Fedora. The release key is also served at /centurion-release-pubkey.asc.
