

Updating to Sovereign AI Brain 7.0.10

One download, one install. No terminal.

6 October 2026

What's new

This release is about continuity: your Brain runs the version that is actually current, and keeps working while it updates.

Always on the current build

Your Brain checks the checkout it launched from and moves itself onto the current one, so the version you see working is the version that is actually running.

ON LAUNCH

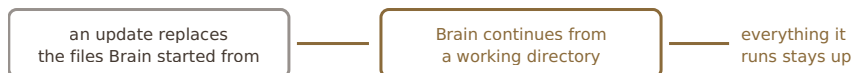

the version you see working is the version that is actually running
work held against a release clears itself once that release has absorbed it

Your Brain checks which checkout it launched from and moves itself onto the current one, so what it shows you is what it is running. Work held against a release is cleared once that release has absorbed it, rather than sitting open.

Updates without interrupting your work

When an update replaces the files your Brain was started from, it carries on from a working directory that exists and keeps going — your terminal, your browser and everything it launches stay up.

DURING AN UPDATE

your terminal, your browser and everything it launches keep going
update a long-running Brain and carry straight on

When an update replaces the files your Brain was started from, it continues from a working directory that exists and keeps going — your terminal, your browser and everything it launches stay up, so you can update a long-running Brain and carry straight on.

Sign-in and messaging, proven in the field

XOAUTH2 sign-in and WhatsApp quoted replies arrive as the variants that proved themselves on real mail servers and real handsets — taken from live deployments rather than written in the lab.

Nothing about your data has changed

Your settings, your conversations and your connections are untouched. If you are set up already, this update is quiet: you will not notice anything, except that the parts described above work.

How to update

1. Sign in and open **Account → Get Brain**. Your download sits at the top of the page.
2. Double-click the downloaded file and choose **Install**. Fedora may ask for your password — that prompt is your computer, not us.
3. **Reopen Sovereign AI Brain**. It sets its own services up and starts them. Nothing else to run.

Check the download if you like. The sha256 above is the exact file we published: 0786b4ec86da9f92d8d2469968a3bd159daf606856824d1887390be1ed01b15f — about 93.8 MB.

Signed with Centurion's release key. No reboot is needed — reopening the Brain is enough. Your data, your Soul and your sessions are untouched by this update.
