

Updating to Sovereign AI Brain 7.0.5

One download, one install. No terminal.

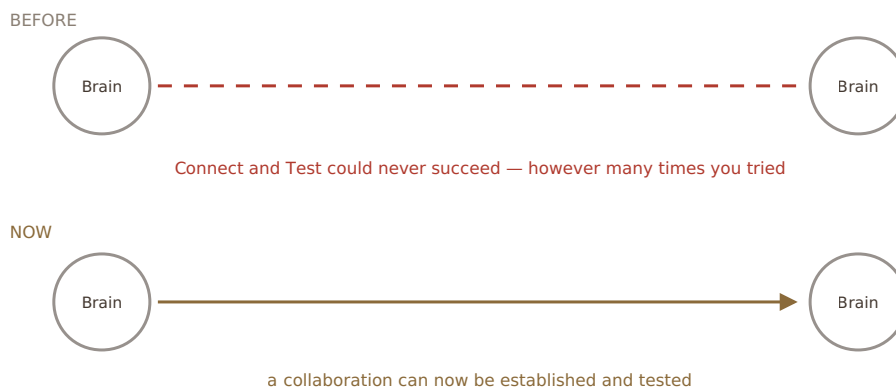

29 September 2026

What's new

The Connect button now does what it says

Pressing **Connect** on a collaboration could never work, however many times the two of you tried. Two parts of the Brain had been asking for **a piece of the program that was never included** — so the request had nowhere to go, and the button failed every time, without saying why.

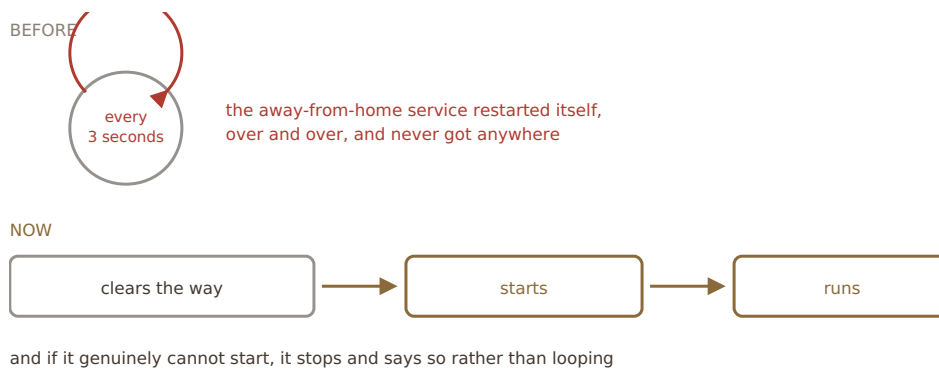

That piece is included now. A collaboration can be established, and tested.

Above: the piece of the program two parts of the Brain were asking for was never included — so the request had nowhere to go and the button could not succeed. Below: it is included, and the same two Brains now connect.

It no longer restarts itself every three seconds

The service your Brain uses **away from home** could get stuck in a restart loop after an update, retrying every three seconds and never arriving. It now clears the way for itself before it starts — and if it genuinely cannot start, it **stops and says so**, rather than looping.

Above: the loop it used to fall into after an update. Below: the order it works in now — it clears the way for itself before it starts, and a service that genuinely cannot start reports that and stops, instead of retrying in silence.

It stops sending you after the wrong problem

When something goes wrong, the Brain now names **what actually failed**. It used to suggest checking the network when the fault was on your own machine, which sent people looking in the wrong place.

Nothing about your data has changed

Your settings, your conversations and your connections are untouched. If you are set up already, this update is quiet: you will not notice anything, except that the parts described above work.

How to update

1. Sign in and open **Account → Get Brain**. Your download sits at the top of the page.
2. Double-click the downloaded file and choose **Install**. Fedora may ask for your password — that prompt is your computer, not us.
3. **Reopen Sovereign AI Brain**. It sets its own services up and starts them. Nothing else to run.

Check the download if you like. The sha256 above is the exact file we published: a7446f2e03a4aba976a5cfef69a4fa95e3fe2863ac470cf5d3b77bac6a07a60c — about 93.7 MB.

Signed with Centurion's release key. No reboot is needed — reopening the Brain is enough. Your data, your Soul and your sessions are untouched by this update.
