

Updating to Sovereign AI Brain 7.0.8

One download, one install. No terminal.

30 September 2026

What's new

A promise is now a promise

A Centurion could set out a plan for overnight work, tell you the **report would be waiting in the morning**, and never create the job that would produce it — because describing a plan was being treated as the same act as scheduling it. It now says plainly when a thing is not scheduled, instead of reporting the plan as though the work were done.

BEFORE

NOW

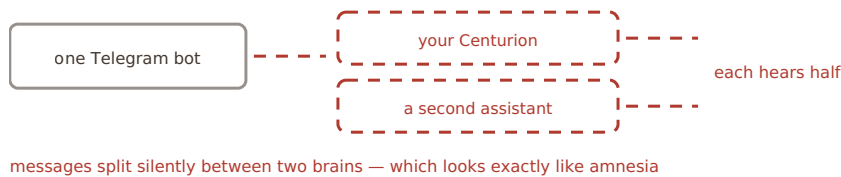

Above: a Centurion could set out an overnight plan, say the report would be waiting in the morning, and never create the job that would produce it — the plan was reported as though it were the work. Below: it either creates the job, or says plainly that the thing is not scheduled.

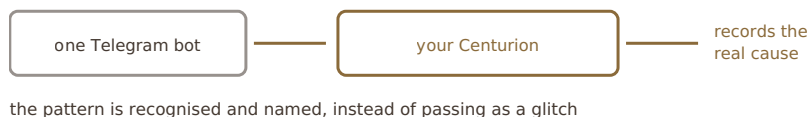

A second assistant answering for you is now visible

When two assistants share one Telegram bot, Telegram hands each message to only one of them, so your messages are **split silently between two brains**. Each only ever hears part of the conversation — which looks exactly like complete amnesia, and is often read as a change of personality. Your Centurion recognises that pattern now and records the real cause by name.

BEFORE

NOW

Above: Telegram hands each message to only one poller, so with two assistants on one bot token your messages were split between them — and each only ever heard part of the conversation. Below: your Centurion recognises the pattern and records the real cause by name, instead of treating each clash as a passing glitch that will clear on its own.

Nothing about your data has changed

Your settings, your conversations and your connections are untouched. If you are set up already, this update is quiet: you will not notice anything, except that the parts described above work.

How to update

1. Sign in and open **Account → Get Brain**. Your download sits at the top of the page.
2. Double-click the downloaded file and choose **Install**. Fedora may ask for your password — that prompt is your computer, not us.
3. **Reopen Sovereign AI Brain**. It sets its own services up and starts them. Nothing else to run.

Check the download if you like. The sha256 above is the exact file we published: 0a0bd4a493a2b61f0fd2e75ee87ef2796b9d0898c84c277ab9c3e2baf6ca2589 — about 93.7 MB.

Signed with Centurion's release key. No reboot is needed — reopening the Brain is enough. Your data, your Soul and your sessions are untouched by this update.
