

Updating to Sovereign AI Brain 7.0.9

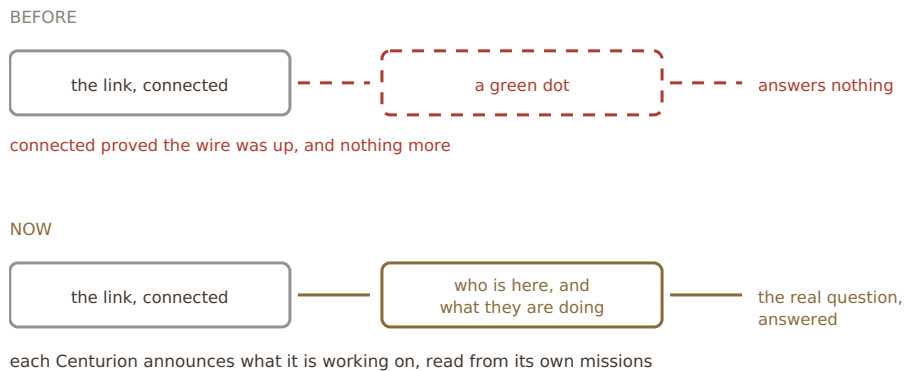

One download, one install. No terminal.

3 October 2026

What's new

A link that shows its work, not just its light

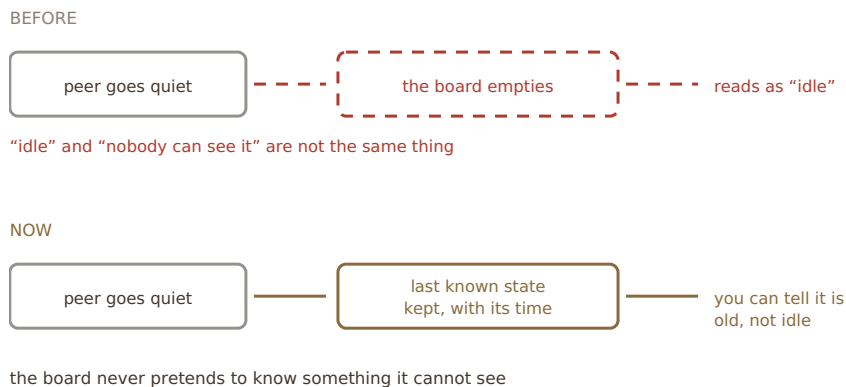

A connected peer used to prove only that the wire was up. Your Centurion now announces **what it is working on** — work genuinely in progress, read from its own mission stack, capped at three so it stays readable — and the other side shows it as who is here and what they are doing. Nothing is invented to look busy: if there is no work in progress, it says so.

Above: a connected peer used to prove only that the wire was up. It said “online” and told you nothing about whether any work was happening. Below: each Centurion reports what it is actually working on — work genuinely in progress, read from its own mission stack, capped at three so it stays readable — and the other side shows it as who is here and what they are doing.

A quiet peer keeps its last known state

When a linked Centurion goes off or drops off the network, its last reported work stays on the board with the time it was said. An emptied board would read as **“idle”** when the truth is **“nobody can see it”** — and those are not the same thing.

Above: when a linked Centurion goes quiet, an emptied board reads as “idle” — when the truth is simply that nobody can see it any more. Below: its last reported work stays on the board with the time it was said, so a stale entry reads as stale rather than as a quiet machine.

Nothing about your data has changed

Your settings, your conversations and your connections are untouched. If you are set up already, this update is quiet: you will not notice anything, except that the parts described above work.

How to update

1. Sign in and open **Account → Get Brain**. Your download sits at the top of the page.
2. Double-click the downloaded file and choose **Install**. Fedora may ask for your password — that prompt is your computer, not us.
3. **Reopen Sovereign AI Brain**. It sets its own services up and starts them. Nothing else to run.

Check the download if you like. The sha256 above is the exact file we published: 30525084a7aaabc
b82e017d0a1d70ad0358f19da42d96392340e64ae94bacbf2 — about 93.7 MB.

Signed with Centurion's release key. No reboot is needed — reopening the Brain is enough. Your data, your Soul and your sessions are untouched by this update.
